08 Capabilities & evidence

Catalog matches and supporting documents

09 Methodology

How readiness and findings were measured

The story **in one read**

Document baseline: where friction shows up today. Worktruth reviewed 5 internal documents spanning finance, operations to establish an operations baseline before live interviews expand the evidence set.

This other organization (about 11-50 people, operating in United Arab Emirates, website

<https://example.com>) is the focus of this report.

Baseline discovery from 5 internal documents across finance, operations.

The strongest cross-cutting themes are Approval bottleneck across manual workflows.

Focus areas: Approval bottleneck across manual workflows

The pages that follow show what we found, what it implies for the operating model, and where to act first.

100

Readiness score, out of 100

5

Internal documents analyzed

1

Cross-team patterns identified

1

Recommendations, catalog-matched

A readiness score of 100

Readiness gates report generation. For a document baseline it weights ready documents, department-tagged coverage, pattern confidence, and document sources.

salman butt llc’s composite score reflects corpus depth so far. Adding employee interviews later strengthens the same signals without discarding this baseline.

Exhibit 1 · Readiness breakdown

Weighted across documents, departments, patterns, and sources.

Ready documents		100
Document departments		100
Pattern confidence		100
Multimodal evidence		100

Worktruth

05 & 06 — SIGNALS AND PATTERNS

What the documents revealed

Signals are recurring friction themes drawn from internal documents. Patterns connect those themes across departments and file types.

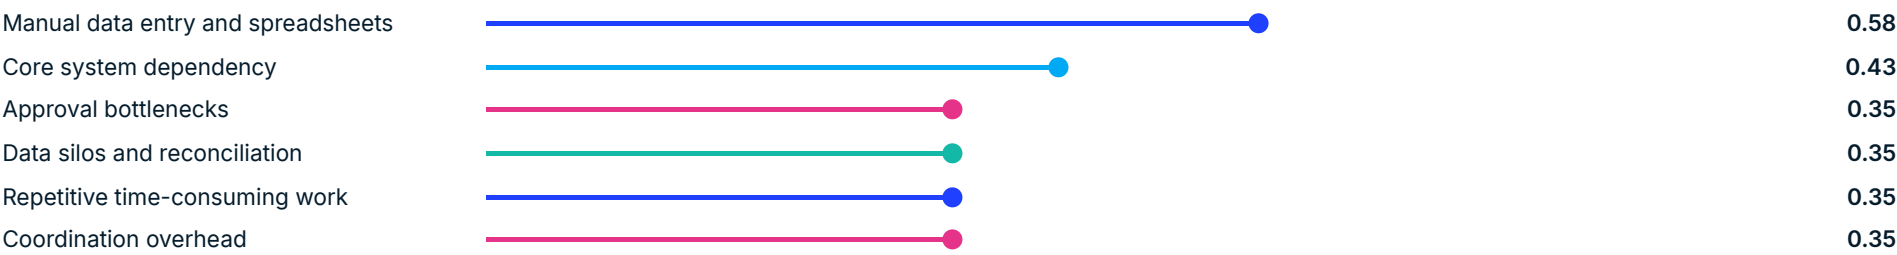

6 signals surfaced from document analysis.

1 cross-team pattern identified.

Recurring pain points

Exhibit 3 · Signals ranked by strength

Colour encodes category: process, tooling, people, data.

Source: Worktruth discovery v1 · salman butt llc

Worktruth

PROCESS

Manual data entry and spreadsheets

STRENGTH 0.58

39 supporting evidence items across documents, interviews, and media.

DATA

Data silos and reconciliation

STRENGTH 0.35

22 supporting evidence items across documents, interviews, and media.

TOOLING

Core system dependency

STRENGTH 0.43

29 supporting evidence items across documents, interviews, and media.

PROCESS

Repetitive time-consuming work

STRENGTH 0.35

15 supporting evidence items across documents, interviews, and media.

PEOPLE

Approval bottlenecks

STRENGTH 0.35

23 supporting evidence items across documents, interviews, and media.

PEOPLE

Coordination overhead

STRENGTH 0.35

10 supporting evidence items across documents, interviews, and media.

The strongest recurring theme is **Manual data entry and spreadsheets** across teams.

KEY FINDING · SALMAN BUTT LLC DISCOVERY

Cross-team themes

Each pattern connects several signals across departments. Confidence reflects how consistently the theme appeared across documents, interviews, and evidence.

Approval bottleneck across manual workflows

CONFIDENCE 0.82 · 62 EVIDENCE

Multiple teams report manual work combined with slow approvals.

LINKED SIGNALS: APPROVAL BOTTLENECKS; MANUAL DATA ENTRY AND SPREADSHEETS

What this means if left unaddressed

These implications are derived from the patterns above — departments involved, linked signals, and documented evidence counts. No speculative ROI is invented here.

Data

Approval bottleneck across manual workflows

Left unaddressed, Approval bottleneck across manual workflows continues to compound across multiple teams, with 62 supporting evidence items already on record.

Driven by: Approval bottlenecks; Manual data entry and spreadsheets

Suggested actions

MEDIUM PRIORITY

Automate manual data entry

Reduce spreadsheet-heavy work with workflow automation. (Pattern: Approval bottleneck across manual workflows)

How: Introduce automation for repetitive data entry; consider RPA or integration platforms. Consider: UiPath, Zapier.

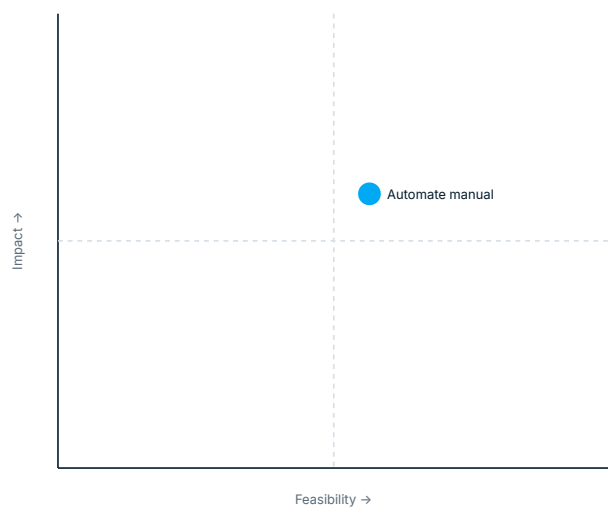

[UiPath](#) · 47% fit

[Zapier](#) · 35% fit

Where to start

Exhibit 4 · Impact vs feasibility

Prioritize high-impact, high-feasibility moves first.

Source: Worktruth discovery v1 · salman butt llc

Worktruth

Start with the highest-priority actions that already have catalog matches and documented evidence. This is the first discovery report for salman butt llc; subsequent versions will show what is new, strengthened, or resolved.

- **Automate manual data entry** — Medium priority

Recommended capabilities

How we measured

This baseline report draws on structured extraction from internal documents for salman butt llc (5 supporting documents cited) . Signals and patterns are produced by rule-based extraction over document text (and specialist interview agents when conversations are added later). Recommendations are synthesized from those signals against the solution catalog — not free-form generative research.

Readiness weighting

Ready documents (40%), document departments (20%), pattern confidence (25%), multimodal / document sources (15%).

Review

When reviewers are assigned, overall notes and section comments are merged into an appendix at platform approval. Live discussions and WhatsApp follow-up threads are collaboration tooling and are intentionally excluded from this deliverable.
