Evidence base and how we measured

The story in one read

0 of 2 employees completed discovery interviews.

Top friction areas include Manual data entry and spreadsheets, Approval bottlenecks, Repetitive time-consuming work.

1 cross-team pattern inform the recommendations below.

25

Readiness score, out of 100

0/2

Employees completed the interview

1

Cross-team patterns identified

1

Recommendations, catalog-matched

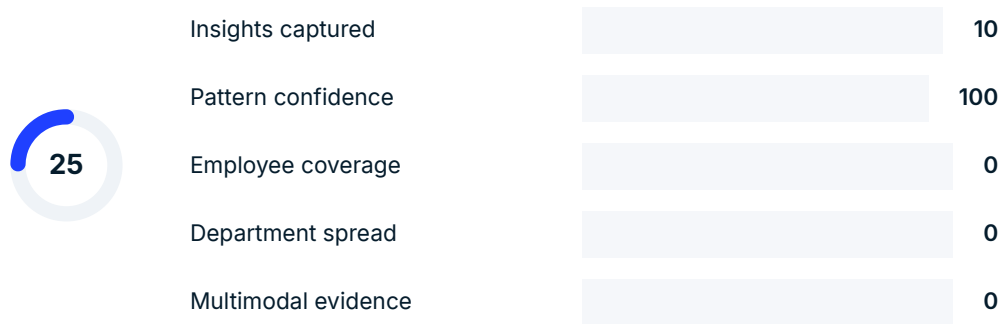

A readiness score of 25

Readiness gates report generation. It is a weighted score across employee coverage, department spread, pattern confidence, and multimodal evidence.

Beta Industries’s composite score reflects the depth of discovery completed so far. Gaps in any weighted component are the fastest route to a stronger next version.

Exhibit 1 · Readiness breakdown

Weighted across employees, departments, patterns, and multimodal evidence.

05 & 06 — SIGNALS AND PATTERNS

What the interviews revealed

Signals are recurring pain points drawn directly from employee interviews. Patterns are the themes that connect them across departments.

3 signals surfaced from discovery interviews.

1 cross-team pattern identified.

Recurring pain points

PROCESS

Manual data entry and spreadsheets

STRENGTH 1.00

1 supporting evidence item across interviews and media.

PEOPLE

Approval bottlenecks

STRENGTH 1.00

1 supporting evidence item across interviews and media.

PROCESS

Repetitive time-consuming work

STRENGTH 1.00

1 supporting evidence item across interviews and media.

The strongest recurring theme is **Manual data entry and spreadsheets** across teams.

KEY FINDING · BETA INDUSTRIES DISCOVERY

Cross-team themes

Each pattern connects several signals across departments. Confidence reflects how consistently the theme appeared across interviews and evidence.

Approval bottleneck across manual workflows

CONFIDENCE 0.82

Multiple teams report manual work combined with slow approvals.

Suggested actions

HIGH PRIORITY

Automate manual data entry

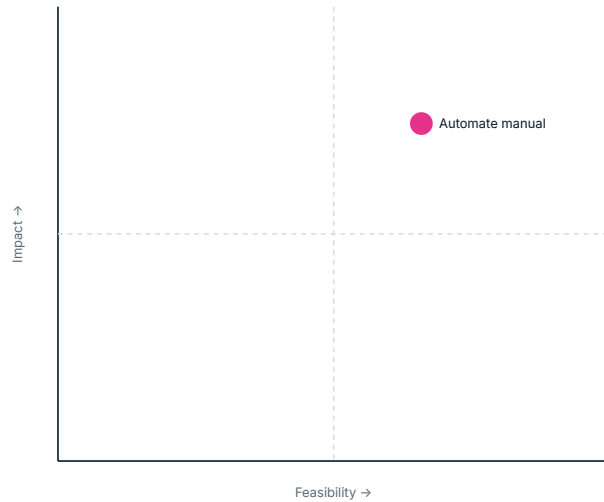

Reduce spreadsheet-heavy work with workflow automation. (Pattern: Approval bottleneck across manual workflows)

Catalog match: [Zapier](#)

Where to start

Exhibit 4 · Impact vs feasibility

Prioritize high-impact, high-feasibility moves first.

Req

This is the first discovery report for Beta Industries. Subsequent versions will show what is new, strengthened, or resolved.

How we measured

Findings draw on structured discovery interviews conducted over WhatsApp and web chat for Beta Industries. 0 of 2 invited employees completed the full discovery flow. Signals, patterns, and recommendations are derived from interview evidence and supporting media, then reviewed before client delivery.

Readiness weighting

Employee coverage (30%), department spread (30%), pattern confidence (25%), multimodal evidence (15%).

Review

When reviewers are assigned, overall notes and section comments are merged into an appendix at platform approval. Live discussions and WhatsApp follow-up threads are collaboration tooling and are intentionally excluded from this deliverable.

APPENDIX — INCLUDED ON PLATFORM-APPROVED REPORTS ONLY

Reviewer notes

Overall notes and section-level comments from expert review, gathered at platform approval. Live discussions and interview follow-up threads are collaboration tooling and are intentionally excluded from this deliverable.

1 reviewer contributed notes.

2 section comments included.

Overall notes

Expert Reviewer

EXPERT REVIEWER

Ready for client share — participation is solid and the top signals match what we hear in ops interviews.

SECTION COMMENTS

SECTION	REVIEWER	COMMENT
signals	Expert Reviewer	Call out the Excel re-entry loop more explicitly; finance evidence is strong enough to lead with.
recommendations	Expert Reviewer	Prioritize the catalog-matched intake automation before the longer tooling consolidation work.
